

Waterix AIRIT 200

Benefits

- High operational efficiency for low energy consumption
- No need for complex infrastructure
- Low initial investment
- Easy and fast to install
- Minimal maintenance
- Effective water circulation and mixing
- Flexible capacity optimization
- Easy to adjust

Product specifications

- **Motor** 5.5 kW
- **Standard Aeration Efficiency (SAE)** 2.0 kgO₂/kWh
- **Water flow** 230 l/s
- **Weight with floats** 130 kg

Waterix AIRIT® 200 is a compact sized and lightweight aerator, which is ideal for aerating both for small sewage basins and lakes. The Waterix AIRIT® 200 aerator is also favored for the aeration and mixing of leachate from landfills, where its special characteristics of easy handling, reliable structure and low energy consumption are best emphasized.

The AIRIT® 200 aerator needs an area in the basin with a diameter of approximately five meters. An intake pipe up to a length of twelve meters may be fitted to the aerator. When fitted with the long intake pipe, the device is especially suitable for aeration of deeper basins or lakes.
