

Waterix AIRIT 2100

Benefits

- High operational efficiency for low energy consumption
- No need for complex infrastructure
- Low initial investment
- Easy and fast to install
- Minimal maintenance
- Effective water circulation and mixing
- Flexible capacity optimization
- Easy to adjust

Product specifications

- **Motor** 55 kW
- **Standard Aeration Efficiency (SAE)** 2.0 kgO₂/kWh
- **Water flow** 2200 l/s
- **Weight with floats** 1300 kg

Waterix AIRIT® 2100 aerator is designed to for larger aeration requirements. Its main applications are wastewater treatment processes of large municipalities and industry, in particular for the pulp and paper industry. The AIRIT® 2100 aerator moves a vast amount of water and it is therefore also efficient mixer. In processes where aeration is irregular, with frequency converter the device may also be used as a mixer only.

Like other Waterix devices AIRIT® 2100 aerator can be in a frequency converter control. In this way, the aeration efficiency can be adjusted steplessly and the most cost-efficient solution will be achieved. Real time measurement of oxygen can be connected to aerator's control system, so the aerator operates only on the power level which is currently required.
