

Aurora Borealis

A stylish, aerating water fountain for large ponds, recommended maximum size of pond: diameter 100m, depth 4m

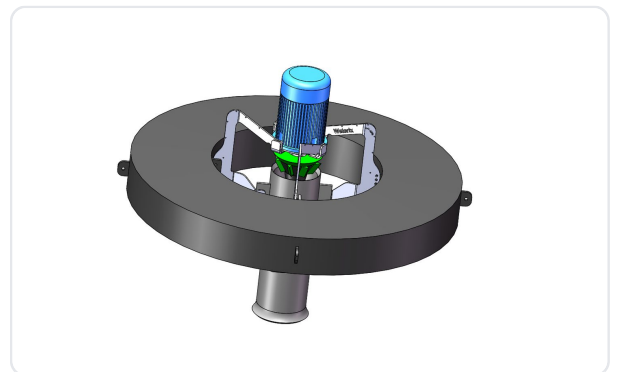

AURORA BOREALIS is designed especially for water hazards on large golf courses and for irrigation pools and to improve the water quality of ponds in parks. Above all it is an effective aerator and cooler, but it also effectively mixes water and causes it to circulate. The important aesthetic aspect of golf courses and parks has not been forgotten.

AURORA BOREALIS removes unpleasant odours and clarifies pondwater. Aeration increases the amount of oxygen in water, which promotes bacterial action to remove nutrients. Together with efficient mixing and cooling, this also prevents the formation of algae.

Benefits

- High efficiency
- Low energy consumption
- Doesn't require extensive infrastructure
- Low initial investment
- Easy to install and maintain
- Also works as a mixer
- Flexible capacity increase

PRODUCT SPECIFICATIONS

- Aerating fountain
